

# ACTIVITY 2-2

## Housing and Equipment - Activity Option 2

Consider the design of each carrier, how many rabbits can travel in each, the size of the carriers, and its ease of transport. Keeping this information in mind choose which carrier best matches each of the situations described below.

\$20.00

\$45.00

\$30.00

1. Becky has one Netherland Dwarf show rabbit. She needs a carrier that will fit in her mom's small car.
2. Carlos and his sister Cristina both have rabbits that they show. They need a carrier that holds several rabbits and that will help them get the rabbits from their car to the show cages quickly.
3. Darius owns a pair of Satin rabbits. She shows both his buck and doe, but he needs to keep them separated so that they will not breed. His cage cannot be too large, because if not it will not fit in his dad's Jeep.

## Reflect/ Apply Questions

1. Which carrier would work best for your situation?
2. Which carrier would be a better buy? Explain why based on the number of rabbits the carrier can hold, its durability, and ease of transport.
3. What would be a better option to buy a carrier or make one of your own? Why?
4. What additional pieces of equipment are these carriers missing?
